Key Skills

Big Data development

Data Transformation & Integration

Data Warehouses

Technology Roadmap Execution

Data Engineering Solutions

Incident & Problem Management

AWS Cloud Services

Agile Project Execution

Client-Facing Communication

Data Architectures

Workflow Automation

Performance Tuning

Data Lifecycle Management

Data Governance

Release Coordination

Stakeholder Engagements

Data Pipeline Optimization

Business Intelligence

Education

Bachelor of Technology(B.Tech) -
Swarnandhra College of Engineering
and Technology
(2019-2023)

Strategic Data Engineer | Orchestrating End-to-End Solutions Across Automotive
Transforming Complex Data Ecosystems into Business Value – 3 Years in
Engineering & Analytics Innovation | Enabling Decision Intelligence with
Python, AWS, and Spark Framework

Profile Summary

- **Result-driven IT Professional** with 3 years of multifaceted experience across **Data Engineering, Production Support, and Software Development**, successfully managing complex data ecosystems in both cloud and hybrid environments.
- **Hands-on expertise** in designing, developing, and optimizing scalable data pipelines using **Python, PySpark, and Databricks**, with a proven track record across industries like **Automotive (Volkswagen Group)**.
- Proficient in cloud technologies including **AWS (S3, Glue, Lambda, Athena, EMR,Airflow,Redshift)** and **Databricks**, enabling secure data lake architecture, real-time ingestion, and orchestration of large-scale ETL workflows.
- Proficient in **production issue resolution, JIRA ticket handling**, release lifecycle management, and multi-team collaboration, ensuring high system reliability, minimal downtime, and stakeholder satisfaction.
- Adept in **stakeholder engagement, conducting business calls, client presentations**, and weekly project reporting while ensuring meticulous project documentation and audit traceability
- Traveled to Germany to present business functionalities and platform capabilities to key clients, ensuring clear understanding and successful project adoption

Technical Skills

Programming Languages & Scripting	: Python, SQL ,Spark
Platforms	: Databricks, Visual Studio Code
Cloud Platforms & Services	: Amazon S3, AWS Glue, AWS Lambda, AWS EMR ,AWS Redshift, AWS Event bridge& AWS Athena
Data Engineering & Analytics	: Data Wrangling ,Data Ingestion, Data Validation & Orchestration
Orchestration	:Argo workflows
DevOps	: Git,Bitbucket, Bamboo,Jira,Confluence,Jrog Artifactory
Databases & Data Warehousing	: Trino, AWS Athena, AWS Redshift
Monitoring & Incident Management	: Service Center 3(SC3)

Work Experience:

AWS Data Engineer Volkswagen Group Tech Solutions India Pvt. Ltd.	Since Aug-2023
---	----------------

Project Name: Smart Quality Analytics

Project Description

The platform orchestrates Batch processing and Daily ingestion Data From Diverse source systems of a vehicle and leverages a modern technology stack consisting of Apache Spark , Delta Lake, SQL, Trino,AWS S3, AWS Lambda, Databricks, AWS Glue , AWS Athena, AWS Redshift, Bitbucket, Argo Workflows and managed via Bamboo CI/CD pipelines with JFrog Artifactory for artifact management.

Key Achievements:

- Delivered efficient and scalable data engineering solutions using Python, PySpark, AWS S3 bucket ,AWS Lambda,AWS Glue,AWS Athena enabling scalable ingestion, transformation, and validation and ensuring seamless data flow across source and target systems for high-profile clients like Porsche, VW, BMW, Skoda, and Scania under VWITS.
- Designed medallion architecture ,Implemented real-time and batch processing pipelines ,Built configuration-driven ETL framework supporting multiple data sources .
- Developed incremental processing system with change data capture patterns, reducing processing time while maintaining ACID compliance, Optimized performance through advanced Optimization techniques.
- Key technical achievements include developing PySpark based ETL jobs with 85% Test Coverage , implementing data validation and quality monitoring, optimizing performance, auto-scaling deployments to Production.
- The business impact has been substantial, reducing data product development time , improving processing efficiency ,Improving Data Quality , ultimately enabling faster business decision-making and improved operational efficiency across Volkswagen Group's
- Successfully executed daily development tasks including writing user stories in JIRA, performing unit/system testing, and validating data integrity across repositories, resulting in enhanced data accuracy and system reliability.
- Streamlined issue resolution by providing expert-level triage and fault resolution support, effectively reducing downtime and escalating complex issues to resolution with minimal disruption.
- Educated end-users on system updates and new features, improving user engagement and adoption of technological enhancements.
- Maintained comprehensive documentation and tracked technical actions via internal work order systems, ensuring transparency and continuity within the development team.
- Consistently met or exceeded service-level targets by resolving user requests within defined timeframes, contributing to improved user satisfaction and support efficiency.

Accomplishments:

- Top Performer Annual Award (2025) - Excellence in Data Engineering Innovation
- Wall of Fame Recognition (2024, 2025) - Outstanding Project Delivery and Technical Leadership
